Larry L. Adams II ALM '16

I have over 25 years experience in serving in various roles heading up governance boards and committees throughout my career in the federal government, faculty senate, military (US Army and US Coast Guard), 508 c non profits (Shriners International), and corporations.

I have a Bachelors of Science (BS) in Political Science and Economics, a Master of Science (MS) in Computer Science, a Master in Business Administration (MBA), Doctorate in Education (ABD), and recently graduate from Harvard University with a Master in Liberal Arts (ALM) in Information Systems and Media Design (2016).

My career spans over 30 years in Computer and Information Systems, Cyber Security, Database Management, Data Science, and Programming. I am currently employed with the Department of Homeland Security (US Coast Guard) as a IT Developer and Web Master and I am also serving as the CEO of la-web-solutions.

I spent 8 years teaching full time in the Computer and Information Science program at Shepherd College where I became the Secretary of the Faculty Senate for 3 years. I have also served on many Boards of Governors to include the Native American Television in Washington, DC, the International Shriners (local unit), Boys Scouts of America (Committee), and the Military (US Army and US Coast Guard) to only mention a few.

The key in working with diverse groups is open communication and clarity in addressing all the issue in a order of priorities and staying organized by setting a strong agenda and empowering each other to work in the best interest of the organization and in this case the students. If elected it is my hope and goal to learn the rules of engagement and to gather opinions of the great minds at our fine university to help our students to achieve both their academic goals as well as creating opportunities for their advancement in their career.
